a—No special equipment is usually required for trailers weighing less than 1000 pounds. b—Recommended for unusually high temperatures, heavy traffic or hilly terrain. c—Available only on non-air-conditioned cars. d—Std. in Convertibles. e—Recommended if towing is continuous. f—Recommended in place of Heavy-Duty Rear Springs (G51) where towing is intermittent. g—Oldsmobile does not offer hitch options. h—Std. on Ninety-Eight.

The attachment for towing a trailer requires careful consideration. While a bumper hitch may be satisfactory for lightweight types of trailers, the hitch for heavier trailers must not attach to the rear bumper or frame rear cross-member only, but must be designed to distribute the load to suitable structural members of the vehicle. Since there are many types, weights, and sizes of trailers, and numerous trailer hitch designs, each having its individual

performance characteristics, it is not practical for Oldsmobile to thoroughly test and evaluate the merits of each. Oldsmobile is therefore unable to offer specific recommendations or assume responsibility for the operation of trailer hitches—which are not manufactured or supplied by Oldsmobile.

When a trailer is attached to a car, the car

becomes not only a load-carrying vehicle, but a load-pulling vehicle. The demands of this type of operation are very different from those for which the automobile is primarily designed and may present problems, such as spring and tire loading, braking, cooling, lighting, and steering. However, careful driving practices and the use of factory-recommended options will better satisfy the requirements of trailer towing.

TIRES

The factory-installed tires on Oldsmobiles are selected to provide the best all-around tire performance for normal operation. They are also designed to operate satisfactorily with loads up to and including the full rated load capacity of the automobile when inflated as recommended.

Inflation Pressures

To ensure the proper tire inflation for the owner's particular requirements, the owner should follow the recommendations in the tire inflation pressures table in the Owner Operating Manual. Tires should be properly inflated and inflation pressures checked periodically. This will ensure the owner of the best tire life and riding comfort, over the full range of driving conditions.

Optional 4-Ply Heavy-Service Tires

Optional 4-ply heavy-service tires are not necessary on passenger cars for normal requirements. However, an extra margin of tire service is available when these options are used at loads up to and including full rated load.

These tires are applicable to extended operation at or near full rated load or for trailer towing when an extra margin of tire service is desired. However, use of a 4-ply heavy-service tire should not be construed as permitting an increase in the full rated vehicle load.
