

 Dodge Vans...
Designed For Personal Mobility

True Mobility Begins With The Right Vehicle...

When it comes to adapting vehicles for mobility, no vehicle manufacturer offers you more choices than Dodge.

We offer you everything from a full-size Ram Maxivan or Ram Wagon to a short-wheelbase Caravan, and everything in between – eight basic sizes and countless variations in models – with a wide selection of standard and optional power trains as well.

Working hand-in-hand with Dodge-approved adaptive equipment converters, your Dodge dealer can make sure that you are able to purchase exactly the right full-size van or minivan to meet your adaptability needs, with the proper safety features, engine, transmission, door configuration, suspension, electrical system, seating arrangements, and other options to help you accomplish your mobility goals.

Nobody builds a more powerful line of full-size vans or wagons for mobility than Dodge. And Dodge-approved converters are

selected for their ability to adhere to strict Dodge guidelines for quality of materials and workmanship.

Below and on the right are brief descriptions of just some of the adaptive equipment that is available. For complete information on which mobility configuration might meet your needs, contact one of the Dodge-approved converters listed on the reverse side. For information about how Chrysler Corporation can help you with financial assistance, call Program Headquarters at 1-800-255-9877.

Swing-Out Seat – For those who have difficulty entering and exiting a vehicle, a swing-out power seat is available which provides assistance to the front passenger.

Commercial Para Transit — In addition to vehicles for personal automobility, Dodge can also provide vans and wagons suitable for commercial para transit applications. These vehicles meet or exceed all applicable American Disability Act standards.

Side Door — The side-mounted lift in a van is the most practical use of space, especially for the driver. The rear bench seat and front passenger seat may be retained. Several different lifts and ramps can be installed to meet a variety of needs for vans that will transport one or more passengers.

Rear Door — Rear-mounted lifts are used for wheelchair loading access to the rear of the van, with the middle seat left in place for an ambulatory passenger. Rear lifts can be equipped with power door operation and a remote control.

Adaptive Controls — Reduced-effort to zero-effort steering, brake and accelerator controls can be custom-fitted to the range and motion requirements of the operator.

...And The Best Equipment 

The Automobility Program

The Chrysler Corporation Automobility Program is designed to enable people with disabilities to lead more active and independent lifestyles. We were the first automotive company to establish such an assistance program — years before most of the others.

Here's a brief description of how the current program works:

When you buy or lease a new Dodge van, wagon or minivan and have adaptive driving or passenger equipment installed on the vehicle, Chrysler Corporation will give you a cash reimbursement to help cover the cost.* Conversions to full-size Ram Vans and Ram Wagons may be reimbursed up to a maximum of

\$1,000 and all other cars, trucks and minivans up to a maximum of \$750. This is in addition to any other applicable Chrysler Corporation cash incentive programs in effect at the time of purchase or lease or any additional outside funding you may secure. For example, commercial van and wagon buyers may receive a choice of either a \$500 cash incentive or a 5-Year/100,000-Mile Power Train Service Contract.† Call 1-800-WORK RAM to obtain a certificate. Remember that all rebate and incentive programs have expiration dates and eligibility requirements. Contact your dealer for complete details.

To help you finance the cost of your new van, or modifications for

adaptive equipment, complete Chrysler Credit financing is available to qualified new vehicle buyers.

Program Headquarters can help you identify and locate local driver assessment centers and adaptive equipment dealers and installers. We can also advise you on which Dodge van or other Chrysler Corporation vehicle can be adapted for your needs and answer any other questions you have about the program.

The number to call for assistance is 1-800-255-9877.

*Adaptive equipment is defined as equipment needed by a physically challenged person to drive, enter, exit and be transported safely in a motor vehicle. Factory optional equipment does not qualify for reimbursement.

†The Power Train Service Contract option is not available for vehicles sold in Alabama, Florida, Mississippi, Oklahoma and Utah due to local laws governing service contracts.

Dodge-Approved Converters

The following Dodge-approved conversion specialists meet specific Dodge process and quality standards. Conversions shown in this brochure are modified or manufactured by companies other than the Dodge Division of Chrysler Corporation. Dodge assumes no responsibility for such modifications or manufacturing. For additional conversion product information and product use guidelines, see the information published by the conversion company.
