

'86 MERCURY  
SABLE

---

# MERCURY SABLE

From the beginning, the goal was to produce a car that shunned compromise, a car that from inception would have a decided and firm commitment to excellence to establish it as one of America's premier road cars.

The result is what you see on these pages, the 1986 Mercury Sable, due for introduction in the fall of 1985.

The unique shape of the new Mercury Sable immediately sets it apart from the competition. But Sable's sleek, aerodynamically efficient exterior was designed with more in mind than just its good looks. The shape of the Sable actually contributes to a quiet and stable ride.

The new Mercury Sable has front-wheel drive for good traction. Its fully independent suspension helps the Sable deliver a smooth, consistently comfortable ride and confidence-inspiring handling.

Sable's power-assisted rack-and-pinion steering helps assure quick response to driver input for precise handling and driver control. And power assisted front disc/rear drum brakes deliver impressive stopping power.

Underneath the hood, the new Mercury Sable is equipped with a brand new, multi-port electronically fuel-injected 3.0-liter V-6 engine and a four-speed automatic overdrive transmission designed to deliver responsive power.

Inside the new Mercury Sable, driver and passengers alike are treated to a spacious and luxurious interior. The seats in the new Mercury Sable are specially designed to accommodate the human shape and to help ensure comfort over long distances.

And Sable's attentiveness to ergonomics, the relation between driver and machine, means that all instrumentation can be viewed with a quick glance of the driver, and that controls are within easy reach so attention remains focused on the road.

The 1986 Mercury Sable. Its unique styling, responsive drivetrain, smooth and confident ride, and spacious, luxurious interior make it the shape you'll want to be in.
