### It's not your job...it's your life.

At Ford, we've never lost sight of that. While we've been working over the years to help make your job easier, our ultimate goal has always been to make your life on the road...a better life.

Introducing the new AeroMax 113" and 122" BBC with 77" integrated AeroLiner sleeper. An available aluminum cab. A self-contained air-suspension system. An impressive array of luxury appointments. Plus all the engineering advances built into the new AeroMax 113" BBC and the new AeroMax 122" BBC.

No one has ever built a truck like this before. More than 5,000 trucking professionals helped us design it with the things that matter most to professional truckers. In ride and handling. In cab comfort. In durability and ease of maintenance. Backed with innovative support programs so you can have the truck you want today – and like the truck you have tomorrow.

When was the last  
time a revolution  
left you feeling this  
comfortable?

- a Vista Window
- a refrigerator/freezer
- TV/VCR prep package
- shore power provisions
- a six-disc CD player with Premium Plus Sound and remote control

# The things that matter most.

With a 122" BBC you'll not only get a great ride in the new AeroMax, but there's less engine cover intrusion into the cab. So there's more room for both driver and passenger to stretch out their legs. But comfort is only the beginning of the story. To help keep you competitive, we've added an aluminum cab and other weight-saving options to go along with the features described here that are engineered for improved performance.

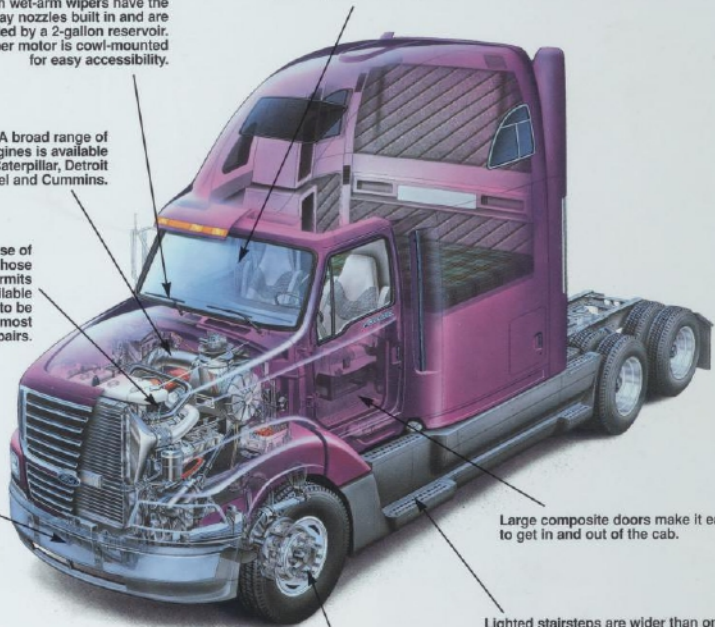

20-inch wet-arm wipers have the spray nozzles built in and are supplied by a 2-gallon reservoir. The wiper motor is cowl-mounted for easy accessibility.

A broad range of engines is available from Caterpillar, Detroit Diesel and Cummins.

Extensive use of straight radiator hose and tubing permits readily available stock material to be used for most repairs.

The single, center-mounted hood hinge simplifies hood removal and contributes to reduced hood vibration.

The slope of the AeroMax hood, along with the large one-piece windshield, deep-cut side windows, external mirror placement, plus available passenger-side lower observation window, provides exceptional all-around visibility.

Large composite doors make it easy to get in and out of the cab.

Lighted stairsteps are wider than on former AeroMax models and are more offset for added safety.

Push-to-connect air-brake fittings are proven to reduce leakage by 70% over typical compression fittings.

Together we can run the country.
